We trust you have received the usual lecture from the local System
Administrator. It usually boils down to these three things:

#1) Respect the privacy of others.
#2) Think before you type.
#3) With great power comes great responsibility.

For security reasons, the password you type will not be visible.
```

```
ansiraji [ ~ ]$ ssh azureuser@40.83.129.77
The authenticity of host '40.83.129.77 (40.83.129.77)' can't be established.
ED25519 key fingerprint is SHA256:NUu3P6Eb00ZQuM5NSudqMvG+iCUBjKxRZgoFzPuzzjg.
This key is not known by any other names
Are you sure you want to continue connecting (yes/no/[fingerprint])? yes
Warning: Permanently added '40.83.129.77' (ED25519) to the list of known hosts.
Welcome to Ubuntu 22.04.4 LTS (GNU/Linux 6.5.0-1025-azure x86_64)

OUTPUT:

2. DESCRIBE AZURE STORAGE SERVICES

WORK WITH BLOB STORAGE

In this section, you'll create a Blob container and upload a picture.

1. Under **Data storage**, select **Containers**.
2. Select + **Container** and complete the information.
3. Select Create.

Note

Step 4 will need an image. If you want to upload an image you already have on your computer, continue to Step 4. Otherwise, open a new browser window and search Bing for an image of a flower. Save the image to your computer.

4. Back in the Azure portal, select the container you created, then select Upload.
5. Browse for the image file you want to upload. Select it and then select upload.

Note

You can upload as many blobs as you like in this way. New blobs will be listed within the container.

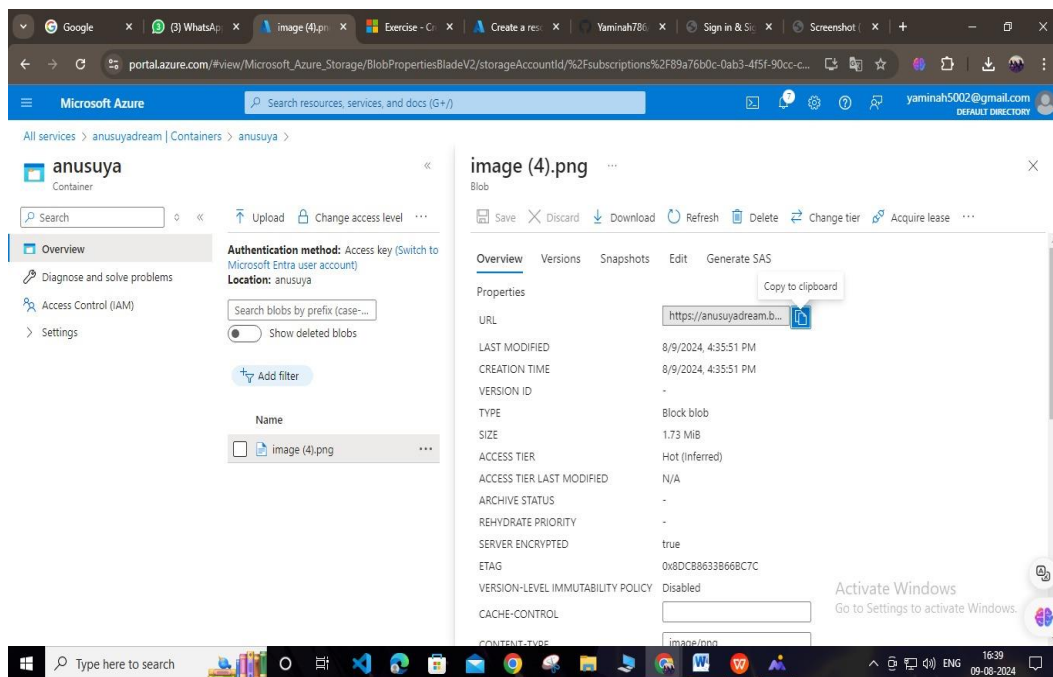

6. Select the Blob (file) you just uploaded. You should be on the properties tab.
7. Copy the URL from the URL field and paste it into a new tab.

- **Change the access level of your blob**

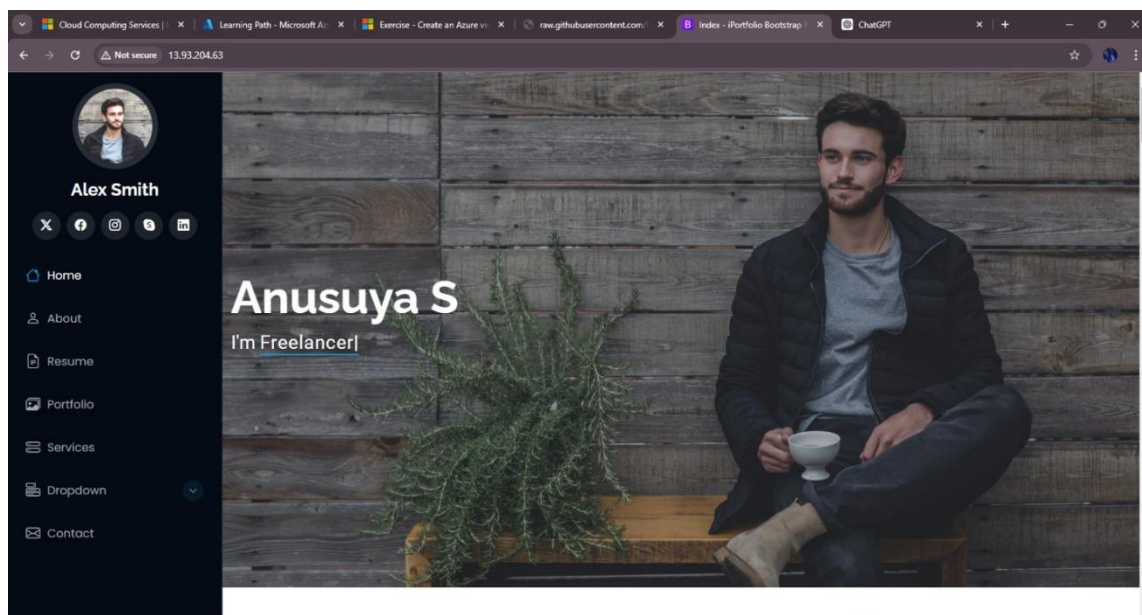

1. Go back to the Azure portal.
2. Select Change access level.

3. Set the Anonymous access level to Blob (anonymous read access for blobs only).
4. Select OK.
5. Refresh the tab where you attempted to access the file earlier.

WORKING:

OUTPUT :

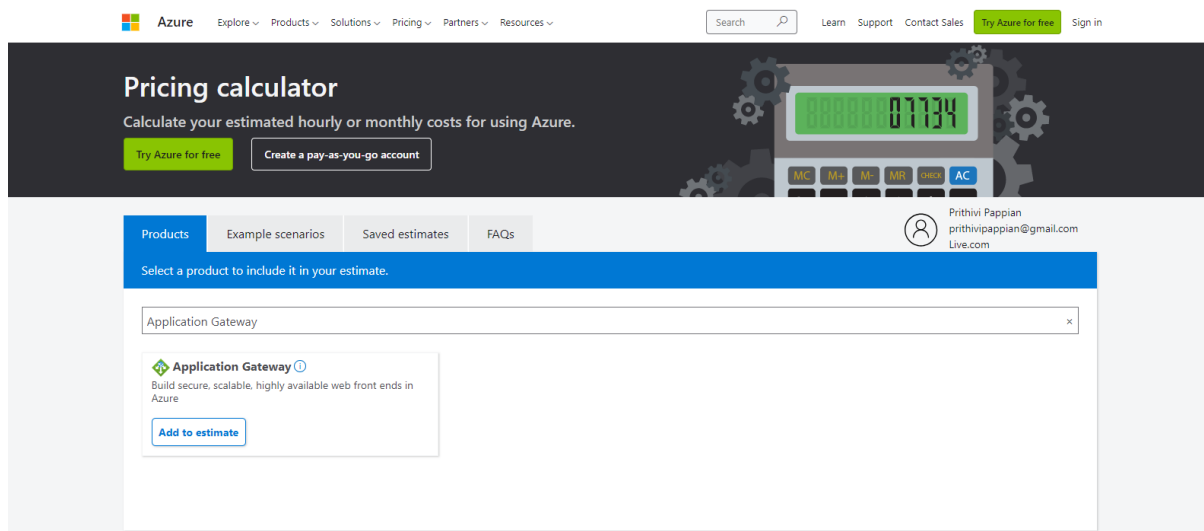

3. ESTIMATE WORKLOAD COSTS BY USING THE PRICING CALCULATOR

- Explore the Pricing calculator
 1. Go to the [Pricing calculator](#).
 2. Notice the following tabs:
 - Products This is where you choose the Azure services that you want to include in your estimate. You'll likely spend most of your time here.
 - Example scenarios Here you'll find several *reference architectures*, or common cloud-based solutions that you can use as a starting point.
 - Saved estimates Here you'll find your previously saved estimates.
 3. Estimate your solution
- Here you add each Azure service that you need to the calculator. Then you configure each service to fit your needs.
- Tip
- Make sure you have a clean calculator with nothing listed in the estimate. You can reset the estimate by selecting the trash can icon next to each item.
- Add services to the estimate
 1. On the Products tab, select the service from each of these categories:
 2. Scroll to the bottom of the page. Each service is listed with its default configuration.
- Configure services to match your requirements:
 1. Under Virtual Machines, set values.

2. Under Azure SQL Database, set values.
 3. Under Application Gateway, set values.
- Review, share, and save your estimate
 - At the bottom of the page, you see the total estimated cost of running the solution. You can change the currency type if you want.
 - At this point, you have a few options:
 - Select Export to save your estimate as an Excel document.
 - Select Save or Save as to save your estimate to the Saved Estimates tab for later.
 - Select Share to generate a URL so you can share the estimate with your team.

WORKING :

Explore the Pricing calculator

Let's start with a quick tour of the Pricing calculator.

1. Go to the [Pricing calculator](#).
2. Notice the following tabs:

Products	Example scenarios	Saved estimates	FAQs
Select a product to include it in your estimate.			

- **Products** This is where you choose the Azure services that you want to include in your estimate. You'll likely spend most of your time here.
- **Example scenarios** Here you'll find several *reference architectures*, or common cloud-based solutions that you can use as a starting point.
- **Saved estimates** Here you'll find your previously saved estimates.
- **FAQs** Here you'll discover answers to frequently asked questions about the Pricing calculator.

ADD SERVICES TO THE ESTIMATE:

The screenshot displays the Azure Pricing calculator interface. The top section, 'Your Estimate', shows a configuration for 2 D2 v3 virtual machines (2 vCPUs, 8 GB RAM) running for 730 hours. The total cost is \$305.14 per month, with \$0.00 upfront. Below this, the 'Virtual Machines' section allows users to select the region (West US), operating system (Windows), type (OS Only), and tier (Standard). The instance series is set to D2-series, and the instance type is D2 v3: 2 vCPUs, 8 GB RAM, 50 GB Temporary storage, \$0.209/hour. The quantity is 2, and the duration is 730 hours.

The bottom section, 'Savings Options', provides details on pricing models and discounts. It shows the 'Compute (D2 v3)' section with a 'Pay as you go' option. The 'Savings plan' section offers a 1-year savings plan (~31% discount) and a 3-year savings plan (~53% discount). The 'Reserved instances' section offers a 1-year reserved instance (~32% discount) and a 3-year reserved instance (~57% discount). The 'OS (Windows)' section shows the 'License included' option. The total cost is \$305.14 per month, with \$0.00 charged upfront.

Category	Configuration	Price
Compute (D2 v3)	Pay as you go	\$170.82
OS (Windows)	License included	\$134.32
Total		\$305.14

4. COMPARE WORKLOAD COSTS USING THE TCO CALCULATOR

- Define your workloads

Enter the specifications of your on-premises infrastructure into the TCO Calculator.

1. Go to the [TCO Calculator](#).
 2. Under **Define your workloads**, select **Add server workload** to create a row for your bank of Windows Server VMs.
 3. Under **Servers**, set the value for each of these settings.
 4. Select **Add server workload** to create a second row for your bank of Linux VMs. Then specify these settings.
 5. Under **Storage**, select **Add storage**. Then specify these settings.
 6. Under **Networking**, set **Outbound bandwidth** to **15 TB**.
 7. Select **Next**.
- In practice, you would adjust any cost assumptions and make any adjustments to match your current on-premises environment.
 - At the top of the page, select your currency. This example uses **US Dollar (\$)**.
 - Select **Next**.
 - **View the report**
 - Take a moment to review the generated report.
 - Remember, you've been tasked to investigate cost savings for your European datacenter over the next three years.

To make these adjustments:

1. Set **Timeframe** to **3 Years**.
2. Set **Region** to **North Europe**.

Scroll to the summary at the bottom. You see a comparison of running your workloads in the datacenter versus on Azure.

WORKING :

The screenshot shows the Azure TCO Calculator interface. At the top, there's a navigation bar with the Azure logo and links for Explore, Products, Solutions, Pricing, Partners, and Resources. A search bar and links for Learn, Support, Contact Sales, and a 'Try Azure for free' button are also present. Below the navigation bar, a progress indicator shows three steps: 1. Define your workloads, 2. Adjust assumptions, and 3. View report. The 'Define your workloads' section is active. It includes a sub-section for 'Servers' with instructions to enter details of on-premises server infrastructure. A table for 'Windows VMs' is shown with the following fields: Workload (Windows/Linux Server), Environment (Virtual Machines), Operating system (Windows), Operating System License (Datacenter), VMs (50), and Virtualization (Hyper-V). Below this, there are fields for Core(s) (8), RAM (GB) (16), and Optimize by (CPU). A 'Contact Sales' button is visible on the right.

This screenshot shows the 'Databases' and 'Storage' sections of the Azure TCO Calculator. The 'Databases' section has instructions to enter details of on-premises database infrastructure and an 'Add database' button. The 'Storage' section has instructions to enter details of on-premises storage infrastructure and an 'Add server workload' button. Below these, there's a table for 'Server Storage' with fields for Storage type (Local Disk/SAN), Disk type (HDD), Capacity (60), Backup (120), and Archive (0). A 'Contact Sales' button is visible at the top right. A 'Shipping Tool' window is open in the bottom right corner, displaying a shipping label and a message: 'Screenshot copied to clipboard and saved. Select here to mark up and share.'

Software Assurance coverage (provides Azure Hybrid Benefit)

Enable this if you have purchased this benefit for your on-premises Windows or SQL Servers. If enabled, Azure Hybrid Benefit (AHB) will be applied to Azure estimates. AHB helps you get more value from your on-premises licenses — save up to 40 percent on virtual machines and up to 82 percent with Azure Reserved Virtual Machines (VM) instances.

Total on-premises vs. Azure cost over time

Savings from running workloads in Azure accrue over time. The following shows how those savings add up over years.

Total on-premises over 5 year(s)

TCO of on-premises environments tends to be driven by compute and data center costs.

Total Azure cost over 5 year(s)

In Azure, certain cost categories decrease or go away completely.

Total on-premises cost breakdown

In Azure, several of the cost categories from the on-premises environment are consolidated and decrease with the efficiency that comes with the cloud.

\$1,776,881
Cost over 5 year(s)

Total Azure cost breakdown

In Azure, several of the cost categories from the on-premises environment are consolidated and decrease with the efficiency that comes with the cloud.

\$1,162,243
Cost over 5 year(s)

On-premises cost breakdown summary		Azure cost breakdown summary	
Category	Cost	Category	Cost
Compute	\$1,152,920.80	Compute	\$676,416.00
Hardware	\$790,280.00	Data Center	\$0.00
Software	\$123,100.00	Networking	\$46,065.00
Electricity	\$70,276.80	Storage	\$248,094.72
Virtualization	\$169,264.00	IT Labor	\$191,667.05
Data Center	\$114,862.60
